Final Score	255	255	95.9%	100.0%	-4.1%	35	62%	246.2	265.2	194.0

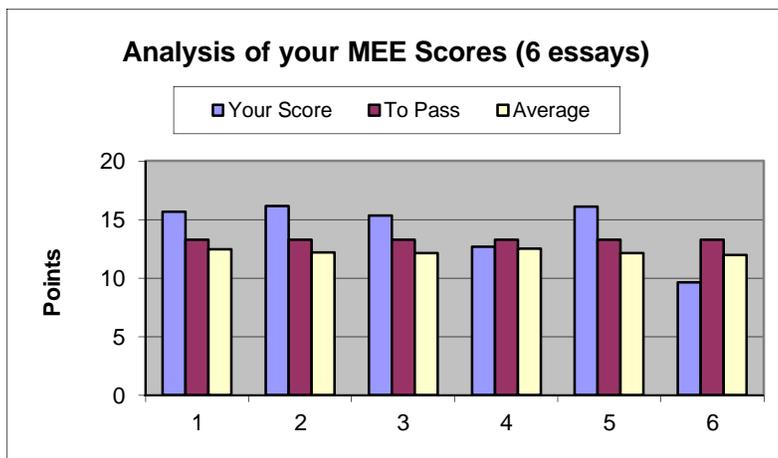

Your WORST to best UBE components (based on # of UBE points away from passing)

Rank	Item	Points
3	MBE	-12.1
2	MPT	-4.5
1	MEE	5.9

Your WORST to best exam items (based on how many UBE points away from passing)

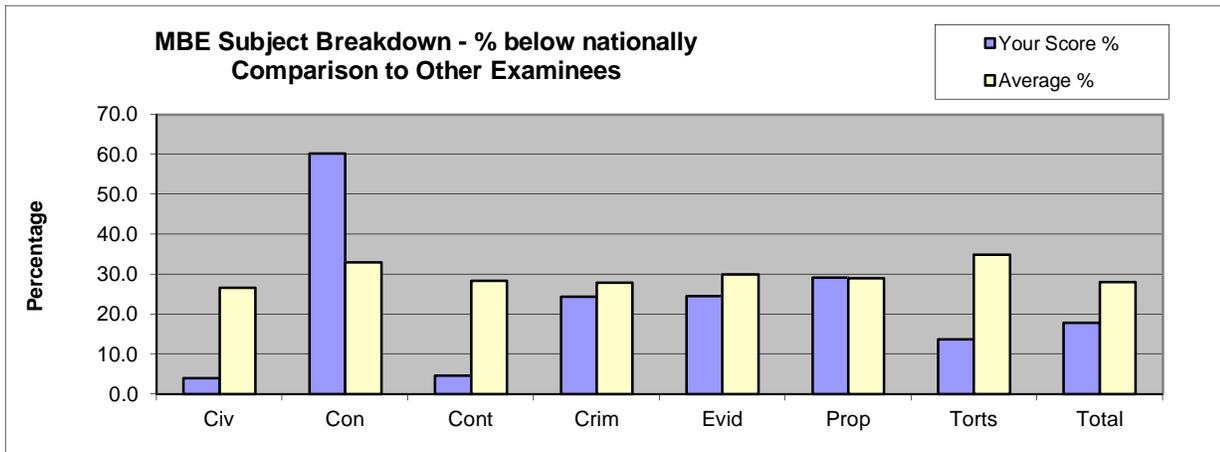

Part	Item	Points
MBE	Contracts	-5.9
MBE	Civil Procedure	-5.9
MPT1	Memorandum	-3.7
MEE	Real Property	-3.7
MBE	Torts	-3.2
MPT2	Brief (Facts/Conclusion)	-0.7
MEE	Corporations/LLCs	-0.6
MBE	Real Property	-0.6
MBE	Evidence	-0.6
MBE	Criminal Law	-0.6
MEE	Family Law	2.1
MEE	Contracts	2.4
MEE	Agency/Partnership	2.8
MEE	Trusts	2.9
MBE	Constitutional Law	4.7

MBE SUBSCORE BREAKDOWN

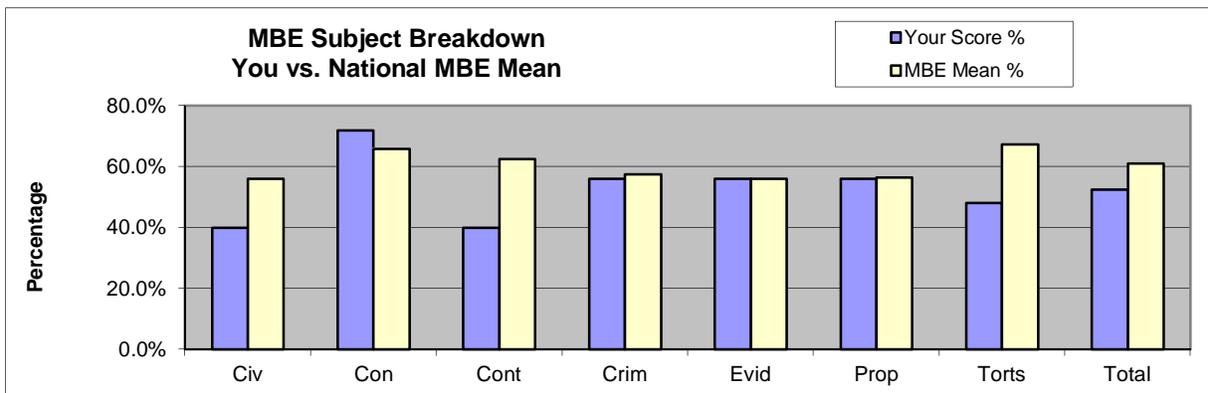

MBE SUBJECT	% below nationally based on 93 scores				
	YOUR	AVG	MAX	MIN	RANK
Civil Procedure	4.0	26.7	90.2	0.1	72
Constitutional Law	60.3	33.0	84.8	0.4	10
Contracts	4.6	28.4	76.2	0.0	77
Criminal Law	24.4	27.8	89.8	0.7	39
Evidence	24.5	30.0	86.1	0.3	43
Real Property	29.1	28.9	90.8	0.2	33
Torts	13.8	35.0	92.5	0.6	71
Total Score	17.9	28.1	77.4	0.0	61

For example, your percentile of 13.8 for Torts means that you did better than 13.8% of examinees nationwide on Torts for the F17 exam. Your rank of 71 means that you did better in Torts than 71 of the 93 examinees who sent me their F17 scores.

ESTIMATED RAW MBE SCORES	RAW	YOUR MBE %	MBE NAT MEAN	DIFF
Civil Procedure	10	40.0%	56.1%	-16.1%
Constitutional Law	18	72.0%	65.9%	6.1%
Contracts	10	40.0%	62.4%	-22.4%
Criminal Law	14	56.0%	57.5%	-1.5%
Evidence	14	56.0%	56.1%	-0.1%
Real Property	14	56.0%	56.5%	-0.5%
Torts	12	48.0%	67.4%	-19.4%
Total Raw Score	92	52.6%	61.0%	-8.4%

Please note that these raw figures are estimates. For example, while your MBE raw score is estimated to be 92/175 correct based on the MBE subscores, your raw MBE is estimated to be 89/175 correct based on the 2013 scale. The Nat Mean is based on Feb data from 1995-2004 (FYI, Civ Pro mean is based on Evidence since no Civ data exists).

OVERVIEW

The purpose of this analysis is to illustrate how you compared to other examinees who also failed the February 2017 NY bar exam and to identify your weak areas. A 2007 NCBE study found that the mean total bar score of domestic educated candidates who took the pre-UBE New York bar exam for the first time in February 2006 was 284 whereas 266 is passing (NOTE: I converted the pre-UBE total scores to the current UBE scale). For domestic repeaters, the mean score was 263. For first time foreign candidates, the mean score was 253. For foreign repeaters, their mean score on the February 2006 exam was 248. Since New York does not release score data for each exam, I averaged the scores of examinees that sent me their scores in order to create a small sample that can be used for comparison purposes.

The Your % of 266 column shows in percentage terms how much each component contributed to a passing score. For example, if you passed with a score of exactly 266, an exactly passing MEE Essay #3 score would contribute 5% to the final score of 266. In your case, your MEE Essay #3 contributed 5.8%.

The RANK column reports your rank for that category when compared to the scores of the 93 people that failed the February 2017 exam and submitted their scores to me. For example, on Essay 1, your rank of 9 means that 8 of the 93 scores for Essay 1 were higher than your score of 60.16, while 84 of the 93 scores for Essay 1 were lower than your score of 60.16.

The %TILE column reports your percentile for that category when compared to the scores of the 93 people that failed the February 2017 exam and submitted their scores to me. For example, on the first MPT, your percentile of 52% means that 48% of the 93 scores for the MPT were higher than your score of 43.67, while 52% of the 93 scores for the MPT were lower than your MPT score of 43.67. Please keep in mind that these percentiles are based only on the failing examinees that submitted their scores to me.

As a result, the above AVG columns show the mean score for that particular topic based on the scores of these examinees that failed the February 2017 exam and submitted their scores to me. Anytime your score is below this average, it appears in RED to illustrate that this is a poor area for you even when compared to others that failed and submitted their scores to me. For example, the average score for MEE Essay 1 among the 93 examinees who submitted their scores to me was 47.6 while your MEE Essay 1 score was 60.16.

The MAX and MIN columns report the highest score and lowest score for that category based on the scores of the 93 examinees that failed the February 2017 exam and submitted their scores to me. Again, keep in mind these maximum and minimum numbers are only from those that failed - they do not accurately reflect the scores of all examinees. For example, on this exam, your final score of 255 was 8.8 points greater than the average final score of 246.2 (based on the 93 submitted scores). There is a graphical breakdown of your score to help you identify your weak areas (In the exam, the MEE Essays are 30%, MPT 20%, and the MBE is 50%).

To provide some context (in the event you took the New York bar exam before the change to the UBE), your UBE total score of 255 would have been a final score of 638 on the pre-UBE New York bar exam (whereas 665 was passing).

Although the following analysis is lengthy, please read and review the entire report. The below analysis explains your scores along with the above charts. Everything in this report is intended to help you understand your scores to make the appropriate adjustments.

MBE

On the MBE, based on your scaled MBE score of 120.9, you did better than 34.4% of the 93 examinees who failed the February 2017 exam and sent their scores to me (meaning 60 of these 93 examinees had a higher MBE score than you and 32 of the examinees had a lower MBE score than you). The mean MBE score among these 93 failing examinees was 123.9. The mean scaled MBE score of the 4,000+ failing examinees who have sent me their MBE scores (from July 2000 to present) is 122, so you did worse on the MBE than the average failer.

Based on your scaled MBE score of 120.9, your estimated raw MBE score was about 89/175 correct. This is based on the 2013 New York MBE raw/scaled conversion (which is the most recent time an MBE raw/scaled conversion was released). Based on the Feb 2017 MBE sub-scores, your estimated raw MBE score was 92/175 correct. Since the F17 raw sub-scores are estimations, your MBE raw score is likely between 89-92 out of 175 graded MBE questions.

This means you answered about 50.9% of the graded MBE questions correctly while the 93 examinees who submitted their scores to me averaged about 53.7% correct. Meanwhile, the average Feb examinee in New York scores about 58.3% correct on the MBE (using 2013 scale).

Based on the February 2017 national statistics from NCBE, you are 17.9% percentile for the MBE. This means that 82.1% of February 2017 examinees nationwide did better than you on the MBE based on your scaled MBE score of 120.9.

With your written score of 134.4, you would have needed an MBE score of 131.6 to pass the exam with a total score of 266. Instead, you scored a 120.9 on the MBE portion of the exam. A scaled MBE score of 131.6 would result from an estimated raw MBE score of about 103/175 correct (or about 58.9% correct).

Assuming the MEE/MPT percentiles follow the Feb 2016 national statistics on the MBE, scoring a 134.4 Scaled MEE/MPT score would place you in the 49.5% percentile among examinees nationwide. This means an estimated 50.5% of Feb 2016 examinees nationwide scored better than you on the MEE/MPT.

With your scaled MBE score of 120.9, you would have needed a written score of 145.1 to pass the exam with a total score of 266. Instead, you scored a 134.4 on the written portion of the exam, which is a difference of -10.7 points.

Assuming again that the MEE/MPT percentiles follow the Feb 2016 national MBE statistics, scoring a 145.1 Scaled MEE/MPT score would have placed you in the 75.5% percentile among examinees nationwide (meaning that 24.5% of Feb 2016 examinees nationwide would have scored better than you on the MEE/MPT, but you would have passed the exam).

Based on a 2007 NCBE study of 26,839 first-time takers of the July 2006 MBE (representing 80% of all known July 2006 MBE first-time takers nationwide), the average MBE score of a first-time taker was 148.1. Based on your MBE score of 120.9, you scored 27.2 points lower on the MBE than the average July 2006 first-time taker. On the July 2006 exam, for these first-time examinees, Caucasian examinees averaged 149.3 on the MBE; Asian examinees averaged 146.1 on the MBE; Hispanic examinees averaged 143.3 on the MBE; and African American examinees averaged 137.9 on the MBE.

MBE

Based on an exam component analysis, if the MBE portion was exactly 50% of your total score, you would need 133 points on the MBE portion in order to pass the NY bar exam. You scored 120.9 points on the MBE portion of the exam - this is 12.1 points less than what was needed to pass the MBE portion of the exam, meaning your MBE score would have to increase by 1.1% in order to pass with a 665 (based on the MBE portion being exactly 40% of your total score).

Generally, the lower your MBE score on your first attempt, the greater the increase in your MBE score on your second attempt. Based on a 1999 NCBE study, if you are a 1st time repeater (you will be taking the exam your 2nd time), based on your MBE score of 120.9, the average MBE score increase was 8 points, meaning an estimated score of 128.9 on your next MBE. Keep in mind that this estimate is based on the mean score change based on an initial MBE score of 120.9. In contrast, the top 5% of MBE scores of 1st time repeaters increased by 24 points (meaning an MBE score of 144.9) while the bottom 5% of MBE scores of 1st time repeaters decreased by 8 points (meaning an MBE score of 112.9).

NYBOLE has again released the MBE subscores, so it is possible to determine the New York MBE mean. In looking at the February exam, the Feb 2017 mean MBE scaled score for all the New York examinees was approximately 134.4. Of the 93 people that failed the February 2017 exam and submitted their scores to me, only 13 examinees scored higher than this February mean NY MBE score of 134.4 (meaning only 14% of the February 2017 failing examinees that submitted scores did better than the Feb 2017 New York MBE mean while 86% of the failing examinees did worse than the New York MBE mean).

Use your % correct on MBE practice questions as a gauge of whether you need to put more time into the MBE. If you are below 60% correct overall, you must increase your MBE study. If you are above 60% correct overall, maintain your present course of study.

Never forget that the most reliable component of the bar exam - this is the portion of the exam you want to do do very well on because you should consistently score the same on it. Your MBE scaled score holds the same meaning over time - it is not affected by the performance of other examinees who sat for the exam, nor by the difficulty of the questions on the particular exam form.

Overall, you did best on the MEE where your MEE score was 107% of a passing score. Your next best component was the MPT where your MPT score was 92% of a passing score. Your worst component was the MBE where your MBE score was 91% of a passing score.

MEE ESSAYS

Alternatively, if your MBE score remained the same, you would have needed to score approximately 145.1 points on the combined MEE Essays and MPTs in order to have passed the February 2017 NY UBE bar exam (whereas the maximum written score among the 93 examinees who sent me their scores was 142.9). This means your total written average scale score would have increased by 10.7 points. You can test scoring scenarios using this calculator (just click on the link):

<http://seperac.com/zcalc-ube-f17.php>

If you had an exactly passing scores on each component of the exam (i.e. MBE score of 133, MEE score of 79.8 and MPT score of 53.2), you would pass the UBE exam with a total score of 266. In your case, I estimate your MEE score to be 85.7 points, which is 5.9 points above the exactly passing MEE score of 79.8. Of the 93 examinees who submitted scores, your MEE score is ranked 1, which means 92 examinees had a worse MEE score than you, while 0 examinees had a better MEE score than you. Of the 93 examinees who submitted scores, the highest examinee MEE score was 85.7 points (whereas 79.8 points is passing) while the lowest MEE score was 60.1 while the average MEE score was 73.4.

An exactly passing MPT score would contribute 53.2 points to your final score. With a score of 85.7 on the MEE component of the exam and 53.2 on the MPT component of the exam, an examinee would need a score of 127.1 on the MBE (which is about 106 MBE questions correct, or about 56% correct) in order to pass the exam with a total score of 266. If your MPT score was the average MPT score of the failing examinees, the MPT component of the exam would contribute 48.8 points to your final score. With a score of 85.7 on the MEE component of the exam and 48.8 on the MPT component of the exam, an examinee would need a score of 131.5 on the MBE (which is about 112 MBE questions correct, or about 59% correct) in order to pass the exam with a total score of 266.

On the MEE, 4 of the questions could be regarded as MEE subject-specific questions while 2 of the questions could be regarded as MBE subject-specific. Your average score on the MEE subject questions was 57.9 versus 48.4 on the MBE subject questions. This is a difference of 9.5 points in favor of the MBE subject based questions.

Even though the MEE is worth 30% of your total score, the MEE questions based solely on the MEE subjects represented only 20% of your total score while the MEE questions based on the MBE subjects (where your MBE studying could be applied) represented 10% of your total score.

The easiest essay was Essay #1 (Contracts), where 36/93 failing examinees received a passing score (38.7%). The 2nd easiest essay was Essay #4 (Corporations/LLCs), where 33/93 failing examinees received a passing score (35.5%). The 3rd easiest essay was Essay #6 (Real Property), where 31/93 failing examinees received a passing score (33.3%). The 3rd hardest essay was Essay #2 (Trusts), where 29/93 failing examinees received a passing score (31.2%). The 2nd hardest essay was Essay #3 (Family Law), where 26/93 failing examinees received a passing score (28%). The hardest essay was Essay #5 (Agency/Partnership), where 25/93 failing examinees received a passing score (26.9%).

You seemed to have difficulty with the Real Property question since it was the 3rd easiest question for the other examinees, but it was the hardest question for you based on your MEE scores.

MPT

On the MPT, your average scaled score was 46.7. The average MPT scaled score based on the submitted score reports was 46.7. Compared to your scores on the other components of the exam, although the weight of the MPT is 20% of the exam, it comprised 18.3% of your total score.

Alternatively, if your MBE and MEE scores remained the same, while you received about 48.7 points on the two MPTs, you would have needed to score approximately 59.4 points on the MPT component in order to have passed the February 2017 NY UBE bar exam (whereas the maximum MPT total score among the 93 examinees who sent me their scores was 68.7).

Looking at the 93 people that failed the February 2017 exam and submitted their scores to me, your rank of 40 on the MPT means that 39 of the 93 scores for the MPT were higher than your score of 48.7 while 53 of the scores for the MPT were lower than your score of 48.7.

Based on an exam component analysis, if the MPT portion was exactly 20% of your total score, you would need 53.2 points on the MPT portion in order to pass the UBE bar exam. You scored about 48.7 points on the MPT portion of the exam - this is 4.5 points less than what was needed to pass the MPT portion of the exam, meaning your MPT score would have to increase by 9.2% in order to pass with a 266 (based on the MPT portion being exactly 20% of your total score).

I strongly urge all failing examinees to order their essays/MPTs from NY BOLE immediately after scores are released in order to review your essay and MPT answers. After an exam, you need to look at your responses and understand what you did wrong to avoid making the same mistakes on future exams. You disadvantage yourself if you do not review your essays because you will not know what mistakes to correct (e.g. did you miss obvious issues, did you fail to analyze as compared to other examinees, was your writing style inconsistent with other examinees, were your answers too short/too long as compared to better scoring answers). I am currently examining UBE bar exam essays/MPTs using the same methodology as the score analysis. If you submit your essays/MPT to me, I will provide you with a free 35+ page MEE/MPT analysis. A sample of the analysis is here:

<http://www.seperac.com/bar/pdf/Sample-Essay-MPT%20Analysis-July%202016.pdf>

The analysis is based on statistics such as words, characters, paragraphs, sentences, sentences per paragraph, words per sentence, characters per word, Flesch reading ease and Flesch-Kincaid grade level. The essays/MPTs are examined against the released above average essays/MPTs and the essays/MPTs of other failing examinees. I also analyze word frequencies and report any useful data. For example, for each essay/MPT, the analysis will report the top 20 words that the above average answers used that you did not. You will find the essay analysis as comprehensive and useful as this score analysis. If you have your essays (typed or handwritten) in PDF format and would like to receive an analysis, please email a PDF copy to joe@seperac.com. If you submit your essays for this analysis, while the essays are used for comparison purposes, any identifying information is redacted and the identity of the essay writer is held strictly confidential.

PASS RATE ANALYSIS

In examining the average pass rates in New York over the past **20 years** of reported information, the February Overall Pass Rate is 46.9% while the July Overall Pass Rate is 69.1%. The February First Time Takers Pass Rate is 59.7% while the July First Time Takers Pass Rate is 73.4%. The February Repeaters Pass Rate is 33.7% while the July Repeaters Pass Rate is 27.8%

The pass rate in Feb 2017 was 44%, which is 2.9% lower than the average July overall pass rate of 46.9%. This means an extra 121 examinees failed as compared to the average of 46.9% that usually pass.

In New York over the past 20 years, the February ABA First-Timers Pass Rate is 74.5% while the July ABA First-Timers Pass Rate is 85.9%. The February ABA Repeaters Pass Rate is 45% while the July ABA Repeaters Pass Rate is 31.7%.

There are no statistics on your demographic pass rate since you did not provide any information regarding your demographics.

Statistically, it becomes harder and harder to pass the bar exam with each attempt. In October 2006, NY BOLE released a paper entitled "Impact of the Increase in the Passing Score on the New York Bar Examination July 2005 Bar Administration." This study was done when the pass rate in NY was 660 (it is raised to 665 in 2005). According to the study, with a passing score of 665, the projected pass rate for Domestic-Educated First-Time Takers was 83%; the projected pass rate for Domestic-Educated Second-Time Takers was 30%; and the projected pass rate for Domestic-Educated Third-Time Takers was 23.2%. Meanwhile, the projected pass rate for Foreign-Educated First-Time Takers was 43.9% while the projected pass rate for Foreign-Educated Repeaters was 13.5% (id. at pages 95, 98). As you can see, pass rates plummet for re-takers, even for the ones most likely to pass, namely Domestic-Educated takers.

According to a 2007 paper entitled Unpacking The Bar: Of Cut Scores And Competence by Gary S. Rosin of the South Texas College Of Law, academic qualifications—law school GPA and LSAT—are the primary 104factors that affect an individual's relative performance on the Bar. According to the paper, examinees with an LSAT of 140 have a 50% chance of passing a bar exam while examinees with an LSAT of 160 have a 92% chance of passing a bar exam.

There are no statistics on the MPRE since you did not provide any MPRE scores.

JULY 2017 EXAM ANALYSIS FOR

On the February 2017 exam, an examinee needed a scaled score of approximately 51 in order to obtain a 'passing score' on an essay (on the February 2017 exam, a scaled score of 51 on an MEE essay would have contributed 13.3 points to the examinee's final score - this is 5% of 266). Based on your scores, a total of four of your six essays were 'passing'. While you did not pass the exam, you demonstrated the capacity to write a 'passing' essay in that 67% of your essays were 'passing'. For information regarding my essay analysis report, click here:

<http://www.seperac.com/index.php#RETAKERS>

In a 2005 study, NCBE analyzed the performance of 4,500 examinees who scored less than a scaled 140 on a July MBE and then re-took the MBE in February. Based on your MBE scaled score of 120.9, the average MBE score increase was 10 points, meaning an estimated scaled score of 130.9 on the July 2017 MBE (estimated 110/190 raw = 57.89% correct based on the July 2013 NY MBE scale). Keep in mind that this estimate is based on the average score change after an initial MBE score of 120.9. In contrast, the largest MBE score increase was 59 points (meaning a maximum estimated scaled score of 179.9) while the largest decrease among the 4,500 re-takers was 22 points (meaning a minimum estimated MBE scaled score of 98.9).

Based on this 2005 study, if your MBE score increases by the average of 10 points on the July 2017 exam (meaning an estimated score of 130.9 on the July 2017 MBE), you would need to have a total written score of 135.1 on the MEE Essays and MPT in order to pass the July 2017 NY UBE Bar exam. This means your written average scale score needs to increase by approximately 0.7 points, which is a 0.5% total increase in your written average scale score. Please note that of the 93 examinees that sent me their February 2017 scores, the highest written score was 142.9.

If you scored the average MEE and MPT scores of the 93 examinees who failed the exam and sent me their scores, you would have received 73.4 points on the MEE and 48.8 points on the MPT. With a score of 73.4 on the MEE component of the exam and 48.8 on the MPT component of the exam, an examinee would need a score of 143.8 on the MBE (which is about 120 MBE questions correct, or about 69% correct) in order to pass the exam with a total score of 266.

On the July 2016 NY UBE exam, an examinee needed a scaled score of approximately 47.8 in order to obtain a 'passing score' on an essay/MPT. Of the 175 examinees that failed J16 and sent me their scores, they averaged 73.5 points on the MEE and 48.6 points on the MPT. With a score of 73.5 on the MEE component of the exam and 48.6 on the MPT component of the exam, an examinee would need a score of 143.9 on the MBE (which is about 120 MBE questions correct, or about 69% correct) in order to pass the exam with a total score of 266.

ADVICE FROM RECENT FEB 2017 PASSERS WHO FAILED IN JULY 2016

Following is advice from similarly situated repeat takers who failed J16, completed my retaker analysis form and just passed the F17 exam. Please note that everyone studies differently, so what works for someone else may not work for you. Each individual examinee comment is separated by *****. Please note that the examinee comments are in no particular order of importance:

If you had to identify one thing that helped you the MOST on the exam, what would it be:

This section is blank because you only submitted your scores to me. If you complete the Retaker Advice Form in its entirety, I can send you an updated score report that contains advice from similarly situated examinees who failed J16 and then passed the F17 exam.

If you had to identify one thing that helped you the LEAST on the exam, what would it be:

This section is blank because you only submitted your scores to me. If you complete the Retaker Advice Form in its entirety, I can send you an updated score report that contains advice from similarly situated examinees who failed J16 and then passed the F17 exam.

Based on your overall study and study materials, which did you find the most useful:

This section is blank because you only submitted your scores to me. If you complete the Retaker Advice Form in its entirety, I can send you an updated score report that contains advice from similarly situated examinees who failed J16 and then passed the F17 exam.

What material did you find the most helpful in your MBE study:

This section is blank because you only submitted your scores to me. If you complete the Retaker Advice Form in its entirety, I can send you an updated score report that contains advice from similarly situated examinees who failed J16 and then passed the F17 exam.

Based on your overall MEE study and MEE study materials, if you had to identify one thing that helped you most on the MEE, what would that be:
